

Lab 1: Introduction to R and Basic Data Cleaning

For this session, we will use data from the NSECE 2019 Workforce Questionnaire to learn basic R commands and practice simple data manipulation exercises.

1. Prepare the working environment

- Set up the working directory
- Install and load required packages

2. Load the dataset

- Import CSV files
- Read .Rda files

3. Basic exploratory data inspection

- Examine the type and structure of selected variables
- Summarize selected variables of interest

4. Basic data cleaning and manipulation

- Subset dataset
- Rename variables
- Recode variables
- Work with factor variables
- Convert between character and numeric variables
- Create new variables

5. Save the cleaned dataset
